Why do we have the rules for research that we have?

U.S. health policy as response to scandal and tragedy
The Patent Medicine Evil in the Early 20th century
Questionable safety of the food supply
Upton Sinclair: The Jungle
Food and Drug Act 1906

A nauseating job, but it must be done
Roosevelt takes hold of the investigating muck-rake himself in the packing-house scandal.
Elixir of Sulfanilamide tragedy 1937

The new, modern way to protect small injuries—
Sulfa-thiazole Band-Aid!

107 deaths
Diet and cosmetic dangers

c. 1930s
dinitrophenol
Food, Drug and Cosmetic Act of 1938

- Drugs or cosmetics must be tested for toxicity before marketing
- Adequate directions for use need to be on package
- Some drugs are designated “by prescription only”
Thalidomide

1960-1961
83 children were born with unusual birth defects, not linked to thalidomide use.

A German scientist makes connections between thalidomide use and thousands of babies born with birth defects.
Kefauver-Harris Amendments to FDA

Drug makers must establish the effectiveness of drug products before they go on the market, and afterwards report any serious side effects.

Requires clinical studies conducted by qualified experts. Requires informed consent by study subjects.
Animal Welfare Act, 1966
LIFE MAGAZINE
1966
National Research Act, 1974
Both the history of human experimentation and history of controversy over human experimentation much older
United States Congress, 1900

considers Senate bill 3424,

a law

to require investigators to disclose in advance the purpose and procedures of any non-therapeutic experiment involving human beings.
Senate bill 3424 calls for explicit ban on experiments using those persons deemed unable to consent, including infants, children under the age of 21, and pregnant women.
The U.S. Army Yellow Fever Board in Cuba, 1900
Reed and his colleagues introduce written permission forms available in both English and Spanish.
The undersigned understands...

perfectly well that in case of the development of yellow fever in him, that he endangers his life to a certain extent but it being entirely impossible for him to avoid the infection during his stay in this island, he prefers to take the chance of contracting it intentionally in the belief that he will receive from the said Commission the greatest care and the most skillful medical service.
Subjects receive $100 in gold, $200 if death occurs
“A written consent was obtained from each one, so that our moral responsibility was to a certain extent lessened. Of course, only the healthiest specimens were experimented upon . . .”

Sea water studies

- A Roma victim of Nazi medical experiments to make seawater potable.
Seawater experiments, Dachau 1944

44 camp inmates ages 16-49) German, Czech, and Polish Roma.

“recruited” from Buchenwald and Auschwitz for a “clean up work detail”

- Group 1 no water at all
- Group 2 fresh water
- Group 3 ordinary sea water
- Group 4 chemically filtered sea water
- Group 5 sea water with a tomato extract to mask taste (but leaving high salt concentration).
Rudi Taubmann’s testimony at the Nuremberg Doctors’ Trial

- When test subjects refused to drink any more sea water, they were physically held down, and a red tube placed in their mouth in which sea water was added so that it went to the stomach.
- Test subjects undergo:
  - Liver punctures
  - Spinal punctures
Studies of burns and wounds, 1942

- disfigured leg of a survivor from Ravensbrueck,

- scars resulted from incisions made by medical personnel that were purposely infected with bacteria, dirt, and slivers of glass.
United States v. Karl Brandt et al
Nuremberg Doctors Trial
Prosecution of 23 Nazi medical personnel
Issue for the Tribunal: what standards to use to judge these experiments?
Defense attorneys liken Nazi camp experiments to American prisoner research during wartime
Malarial convicts contribute to knowledge of the disease.

TO THE
AMERICAN PEOPLE:

Your sons, husbands and brothers who are standing today upon the battlefronts are fighting for more than victory in war. They are fighting for a new world of freedom and peace.

We, upon whom you have placed the responsibility of leading the American forces, appeal to you with all possible earnestness to invest in War Bonds to the fullest extent of your capacity.

Give us not only the needed implements of war, but the assurance and backing of a united people so necessary to hasten the victory and speed the return of your fighting men.

Sincerely yours,
William H. Bull

LIFE

PRISON MALARIA

Convicts expose themselves to disease so doctors can study it.
American researcher Andrew C. Ivy

- Sent by AMA in 1946 to Nuremberg as medical consultant to the American military tribunal in the Doctors’ Trial.

- Self-experimenter in seawater studies, high altitude studies and experiments on volunteers for US Naval research
Permissible Medical Experiments

Comes to be known as the Nuremberg Code
First principle

The voluntary consent of the human subject is absolutely essential.
9 additional principles

- Based on animal experimentation
- Must avoid all unnecessary suffering, injury
- No reason to think that death will result
- Risk should not exceed benefit
- Only scientifically qualified personnel
Outcome of Doctors Trial

7 acquitted,
7 received death sentences,
9 received prison sentences ranging from 10 years to life imprisonment.
Karl Brandt sentenced to death

- Offers his body for experimentation
- US Army rejects the offer
- Executed at Landsberg Prison June 2, 1948
The Nuremberg Code
Meaning for American medical researchers?
The Nuremberg Code

- Published in Science in 1953
- Adopted by Secretary of Defense Charles Wilson in 1953 for the US armed forces
- Part of a symposium about the limits and dilemmas posed by experimentation on human beings
- Classified as Top Secret
- Implementation failure
Would American investigators have met the Nuremberg Code?
No.
Many American researchers regarded the Code as unworkable would not allow experiments on children, those in institutions, the dying, and the mentally ill.
In the 1950s Medical research in US

--associated with volunteers

--traditions of self-experimentation

--anticipated significant advances in medicine
Death of a Volunteer

March, 1952

Contaminated Blood Injection Kills Youth In Seattle Preservation Research Project

SEATTLE, March 24 (AP)—An 18-year-old college honor student died yesterday of an injection of bacterially contaminated blood given during an experiment connected with war research on blood preservation by the University of Washington.

James Stanley Leedom, a freshman at Seattle University, was one of forty volunteers who participated in the project seeking better ways to preserve whole blood.

He died three days after the injection despite every effort to save his life.

Dr. Robert H. Williams, head of the University of Washington Department of Medicine, said the blood had become contaminated "by some phenomenon" after it had been refrigerated.

"The only way we can explain it," said Dr. Williams, "is that the bacteria was able to grow in some manner while the blood was at freezing temperature and not at body temperature."

Both Dr. Williams and Dr. Clement A. Flinch, Associate Professor of Medicine in charge of hematology at the university, said they would "gladly participate in the project with their son's death."

James Stanley Leedom

Thrives when chilled. It produces shock and high fever. The father, Stanley P. Leedom, said he held no one at fault for his son's death.
Polio epidemic c. 1952
PARENTAL REQUEST FOR PARTICIPATION OF CHILD IN POLIOMYELITIS VACCINATION FIELD TRIAL

The National Foundation for Infantile Paralysis, Inc., in cooperation with state and local health, medical and educational authorities, is conducting a nation-wide field study of the effectiveness of a vaccine which may be protective against paralysis due to poliomyelitis. The vaccine consists of chemically killed poliomyelitis virus of all three known types. For purposes of this study, several thousand children will be given three injections of this vaccine into the arm over a period of several weeks; at least an equal number of unvaccinated children will be observed so that a comparison can be made between the two groups. The children in each group, those who are vaccinated and those who are not, are equally important to the study. In certain instances it will be necessary to test small samples of blood at intervals during the study to determine the amount of antibodies against poliomyelitis that are present.

I HEREBY REQUEST that my child, ________________________________, be vaccinated if selected, or otherwise be permitted to participate in the procedures described above without cost to me.

risks and nonetheless eager to take part in it. "I would not have hesitated," Southam said, "if it would have served a useful purpose. But," he continued, "to me it seemed like false heroism, like the old question whether the General should march behind or in front of his troops. I do not regard myself as indispensable—if I were not doing this work someone else would be—and I did not regard the experiment as dangerous. But, let's face it, there are relatively few skilled cancer researchers, and it seemed stupid to take even the little risk."

Syphilis Victims in U.S. Study Went Untreated for 40 Years

By JEAN HELLER
The Associated Press

WASHINGTON, July 25—For 40 years the United States Public Health Service has conducted a study in which human beings with syphilis, who were induced to serve as guinea pigs, have gone without medical treatment for the disease and a few have died of its late effects, even though an effective therapy was eventually discovered.

The study was conducted to determine from autopsies what the disease does to the human body.

Officials of the health service who initiated the experiment have long since retired. Current officials, who say they have serious doubts about the morality of the study, also say that it is too late to treat the syphilis in any surviving participants.

Doctors in the service say they are now rendering whatever other medical services they can give to the survivors while the study of the disease’s effects continues.

Dr. Merlin K. DuVal, Assistant Secretary of Health, Education and Welfare for Health and Scientific Affairs, expressed shock on learning of the study. He said that he was making an immediate investigation.

The experiment, called the Tuskegee Study, began in 1932 with about 600 black men,

Persistent stories about the deliberate infection of the men in Tuskegee with syphilis
The AIDS ‘Plot’ Against Blacks

Bizarre as it may seem to most people, many black Americans believe that AIDS and the health measures used against it are part of a conspiracy to wipe out the black race.

A survey of black church members in 1990 found that an astonishing 35 percent believed AIDS was a form of genocide. A New York Times/WCBS-TV News poll in 1990 found that 1 black in 10 believes the AIDS virus was “deliberately created in a laboratory in order to infect black people” and an additional 2 in 10 thought that might be so. A Gallup/Newsweek poll in March produced similar results.

Even some dedicated black health workers engaged in the fight against AIDS decline to disavow these fears. Testifying before the National Commission on AIDS, one said that “until proven otherwise” she considered AIDS a man-made disease.

Worse yet, the treatments and preventives against AIDS have become suspect. Some blacks believe that AZT, the harsh drug used to combat the disease, is a plot to poison them … that campaigns urging use of condoms, the best way to prevent sexual transmission, are a scheme to reduce the number of black babies … that distributing clean needles to slow transmission among addicts is a plot to encourage drug abuse.

At its most destructive, the paranoia causes many blacks to avoid medical treatment. Unless black and Hispanic leaders play a more vigorous role in countering the fears and mistrust, it will become ever harder to slow the epidemic.

The task is urgent because the disease is now spreading most rapidly among minorities. Last year, for the first time, the number of AIDS cases reported for minorities exceeded the number for whites. Most worrisome for the future, blacks account for a majority of AIDS cases in women and children. “AIDS in future generations may be primarily a disease of black people,” the New York Department of Health warned last month.

Yet the response to this growing crisis has been sluggish. Financially pressed minority organizations and local governments have little energy for fighting AIDS, especially given the stigma attached to its main victims, homosexuals and drug addicts. But whether financing for minority AIDS programs has lagged behind white programs, as some black leaders charge, is not clear. Federal and state funds to minority AIDS organizations have gone up and the Government’s central programs, like counseling and testing services, have huge minority caseloads.

No programs, even if well financed, will succeed without a change in attitudes. Thus it is welcome news that the New York State Health Department, with the help of black politicians and community leaders, has started a media campaign to encourage blacks to mobilize against AIDS.

The campaign rightly stresses that AZT and condoms are not plots against blacks. But it refuses to counteract the paranoia about AIDS as genocide, saying only that no matter how AIDS got started, there are ways to stop it. Campaign officials reasoned that few blacks would believe government denials anyway. But surely black leaders and public figures with high credibility, such as Magic Johnson, the basketball star, could do much to discredit the pernicious and dispiriting rumors.

Meanwhile, Federal, state and local health officials need a far better assessment of the flow of AIDS money into minority communities and stronger programs to fight the disease there. Costly drug treatment ought to be provided to all who seek it, an investment that would yield dividends far beyond slowing the spread of AIDS. And more vigorous outreach programs might persuade more individuals to avoid risky behavior.

As white Americans, shaken by the riots in Los Angeles, search for ways to help afflicted and distrustful minorities, there’s no wiser way to start than AIDS. A failure to treat and prevent AIDS among minorities: That would be the true genocide.
